

What changes in the connector with odoo 19?

What's new in the frepple connector for odoo 19?

With Odoo 19 the frepple team took a step back to come up with a new-generation of the Odoo integration.

At a high level, these are the key changes:

- Cleaner separation of the ERP and the APS:
Some activities belong to the ERP. Some activities belong to the APS.
Keep them distinct, rather than mixing them.

- XML is dead. Long live JSON.

The connector is using JSON from now on as the data format.

Frepple now opens as a separate tab, rather than embedding frePPLe in Odoo.

Type	Product	Quantity	Start Date	End Date	Vendor	Sales Order
☐ purchase	[FURN_1118] Corner...	1.00	Jan 14, 10:12 AM	Jan 14, 10:12 AM	Ready Mat	
☐ purchase	[FURN_8900] Drawe...	2.00	Jan 14, 9:13 AM	Jan 14, 9:13 AM	Gemini Furniture	
☐ purchase	cushion	16.00	Jan 14, 12:07 PM	Jan 14, 12:07 PM	Lumber Inc	
☐ purchase	cushion	10.00	Jan 16, 10:26 AM	Jan 16, 10:26 AM	Lumber Inc	
☐ purchase	cushion	10.00	Jan 16, 2:42 PM	Jan 16, 2:42 PM	Lumber Inc	
☐ purchase	varnish	50.00	Jan 14, 10:12 AM	Jan 14, 10:12 AM	Azure Interior	
☐ purchase	wooden beam - 木头	50.00	Jan 14, 9:27 AM	Jan 14, 9:27 AM	Deco Addict	

Frepple publishes a filtered list of results to odoo as “recommendations”.
PO and MO approvals can now be done directly from within odoo.

1) User interface separation

Before Odoo 19:

- Integrated user interface with frepple as an iframe bottom panel within Odoo
- Confusing “double menu bar” in Odoo

[illegible]

From Odoo 19 onwards:

- Frepple opens in a separate browser tab
- Widget in frepple to open Odoo
- Same single-signon

Why?

ERP activities and APS (advanced planning and scheduling) analysis are very distinct business processes.

Keeping the APS user interface dedicated for advanced plan analysis is more natural than trying to unify it in the ERP.

The screenshot displays the Odoo 19 interface with the Frepple menu option highlighted. The menu option is labeled "FrePPLe" and is located in the top navigation bar. The menu is open, showing options for "FrePPLe Live" and "Recommendations".

The Frepple widget is visible in the bottom right corner of the Odoo interface, showing the "FrePPLe" logo and a search bar. The widget is labeled "FrePPLe" and "FrePPLe Live: last refresh for My Company (San Francisco): 2026-01-16 12:00 AM".

The main content area shows a "Purchase Order" form for a "Purchase Wooden Beam - 木头" from "Deco Addict 9". The form includes fields for Name, Reference, Item, Supplier, Location, and Ordering Date. The "Ordering Date" is set to "01/16/2026 12:00 AM".

The "Inventory" section shows a table with columns for dates from 2026-01-14 to 2026-01-21. The table includes rows for "Start Inventory", "Safety Stock", "Total Consumed", "Consumed Proposed", and "Consumed Confirmed".

Annotations in the image point to the "FrePPLe" menu option in the Odoo interface and the "FrePPLe" widget in the Frepple interface.

2) Frepple recommendations in Odoo

From Odoo 19 onwards:
Frepple sends a list of ERP-relevant planning results as recommendations to Odoo.
Reviewing and accepting these recommendations can be done completely from within Odoo.

Current list of recommendations

- Purchase orders to be placed shortly
- Manufacturing orders to be created shortly
- Manufacturing orders to be rescheduled to a new date
- Sales order delays

Purchase Orders Products Reporting Configuration frePPLe

3) Frepple plan generation

Before odoo 19:

- "Import from odoo" + "Create plan" + "Export to odoo" are separate tasks

From odoo 19 onwards:

- You can run them as a single task.
- (Running as separate task is still possible)

Launch tasks

Create a plan ? +

Launch 2

Load all input data, run the planning algorithm, and export the results.

Planning steps

- ☒ Generate forecast ?
- ☒ Compute inventory parameters ?
- ☒ Generate inventory rebalancing requests ?
- ☒ Generate supply plan ?

Plan type

- ☒ Constrained plan ?
- ☐ Unconstrained plan ?

Constraints

- ☒ Capacity: respect capacity limits ?
- ☒ Manufacturing lead time: do not manufacture in the past ?
- ☒ Purchasing lead time: do not purchase in the past ?

Import data from odoo ? +

Launch 1

Import Odoo data into frePPL.

Export data to odoo ? +

Launch 3

Export frePPL data to odoo.

Launch tasks

Create a plan ? +

Launch

Load all input data, run the planning algorithm, and export the results.

Planning steps

- ☒ Import Odoo data ? 1
- ☒ Generate forecast ? 2
- ☒ Generate supply plan ?
- ☒ Send recommendations to Odoo ? 3

Plan type

- ☒ Constrained plan ?
- ☐ Unconstrained plan ?

Constraints

- ☒ Capacity: respect capacity limits ?
- ☒ Manufacturing lead time: do not manufacture in the past ?
- ☒ Purchasing lead time: do not purchase in the past ?

Import data from odoo ? +

Launch

Import Odoo data into frePPL.

Export data to odoo ? +

Launch

Export frePPL data to odoo.

Why?

The vast majority of frepple users run them always in sequence.
It makes sense to always create a plan with the latest odoo data, isn't it?

4) Frepple names

Before frepple 9.13:

- Odoo's "manufacturing orders" and "work orders" are both called "manufacturing orders" in frepple
- Only a small toggle to select what to display

From frepple 9.13 onwards:

- Frepple now natively makes the same distinction between "manufacturing orders" and "work orders"

Why?

Aligning names between odoo and frepple simplifies the learning curve.
Simplifies also the day-to-day planner workflows.

You're not on Odoo 19 yet?

How do these changes impact current users of the connector?

- New frePPLe releases remain compatible with the old-style connector. Odoo data in XML format will continue to be supported.
- The changes on the frePPLe side will also be available for people using the old-style connector. Eg link back to Odoo, ability to run import & plan in a single step, etc...
Eg Running frepple and odoo import in a single step is hidden by default
- The old-style way of approving proposals in frePPLe will continue to be supported. We don't force people to use the recommendations from within Odoo.
- What you will NOT have are the changes on Odoo side.
Eg recommendations from frePPLe, opening of frePPLe in new tab.
- If the new change are stable and received well by users, the frePPLe team may bring the changes from Odoo 19 also available on older versions of the Odoo connector (except the xml format change)
